AgentSphere

Your SAP Business One, now with an AI workforce.

AgentSphere puts more than 100 AI agents, dashboards and smart workflows on top of SAP Business One. Ask questions in plain language, scan documents straight into SAP and let agents prepare, check and post your daily transactions.

Talk to your ERP | Agentic workflows | Document AI | Live insights | Multi-company

Silver Touch TECHNOLOGIES

Agentic AI for SAP Business One

A product of Silver Touch Technologies Limited

WHY AGENTSPHERE

From ERP screens to AI colleagues

Your team spends hours searching reports, re-typing documents and chasing approvals. AgentSphere turns SAP Business One into a system you can talk to, with agents that understand your data, follow your business rules and finish the work, while SAP stays your single source of truth.

100+
apps, agents & dashboards

8
business areas, O2C to finance

5
AI engines incl. GPT-4o & Claude

Live
on SAP B1 HANA & SQL Server

Talk to your ERP

Ask "overdue invoices over 60 days" or "top items this quarter" and get tables, charts and insights in seconds.

Agents that do the work

Guided agents build quotations, orders, deliveries, invoices, payments and stock transfers, then post them to SAP.

Document AI

Scan supplier invoices, POs, expense bills, challans, gate passes and bank statements. The data is read, matched and ready to post.

Live business insight

Finance, sales, purchase and inventory dashboards read straight from SAP, with an AI analyst built in.

Decisions, not just data

Credit risk, cash-flow forecasts, payment runs, pricing and reorder suggestions, each with the reasoning shown.

Enterprise ready

Roles and permissions per menu item, multi-company switching, AI usage limits and full audit trails.

BUILT FOR EVERY ROLE

- **Sales teams** create quotes and orders in a chat, with customer prices filled in automatically.
- **Purchase & stores** move from PR to PO to GRPO to invoice in a few clicks.
- **Finance** chases the right customers, plans payments and closes the month faster.
- **Management** asks questions in plain language and gets clear answers.

Works with what you have

AgentSphere connects to the SAP Business One Service Layer and, optionally, directly to your HANA or SQL Server database. Nothing to migrate: your documents, masters and approvals stay in SAP.

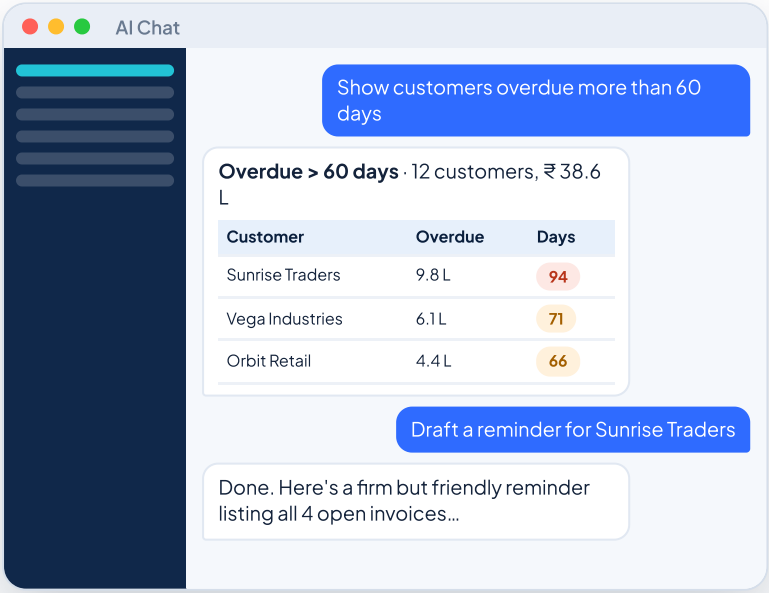

SAP B1 Service Layer · SAP HANA · MS SQL Server · Azure OpenAI · Anthropic Claude

HOW IT WORKS

Ask, scan or click. The agents take it from there.

Every request flows through the AgentSphere agent layer. It understands what you need, checks it against SAP master data and your business rules, then answers or posts the document live in SAP Business One.

AI Chat answers from live SAP data, with tables, charts and follow-up actions.

One assistant, five engines

Pick the engine that fits the question. Common questions are answered instantly at no AI cost.

- **Standard:** instant answers for stock, sales, aging and open documents.
- **GPT-4o & Claude:** free-form questions across all modules.
- **DB SQL:** the AI writes read-only SQL on HANA or SQL Server.
- **Analytics V2:** conversational analytics with AI insight reports.

Hands-free

Speak your question, attach a PDF or photo, and get spoken replies. Save favourite prompts and reuse them.

WHAT YOUR TEAM GETS

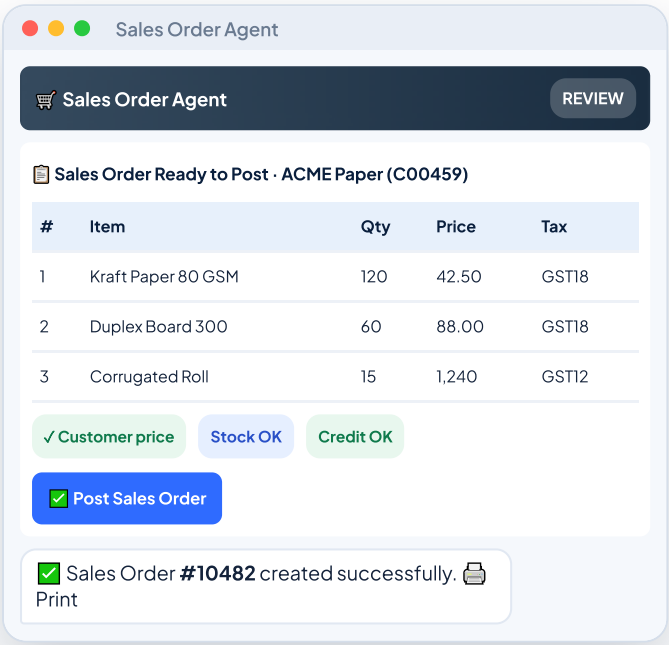

- **No new system to learn**
- **SAP stays your single source of truth**
- **Answers grounded in your live data**

SALES · ORDER TO CASH

From enquiry to cash, in one conversation

Guided sales agents carry each document forward: copy, check and post, with customer prices, stock availability and credit checked along the way.

Quotation AI price check → **Sales Order** Customer pricing → **Confirmation** Email to customer → **Load Planning** 3D container fit → **Delivery** Batch / serial / bin → **A/R Invoice** Copy from delivery → **Payment** Match receipts

The Sales Order Agent posts orders with customer-specific prices filled in automatically.

Quote to order in minutes

Pick a customer, add items with prices from SAP price lists, special prices and discounts, then post.

Customer POs become orders

Upload a customer PO PDF, or let the mailbox watcher read emailed POs. The agent matches the customer, checks credit and stock, and creates the order.

Deliver and invoice with copy-from

Open orders flow to delivery, A/R invoice and credit memo, with batch, serial and bin selection built in.

Load Planner

Plans containers and trucks in 3D, with a step-by-step loading sequence for the team.

Sales Analysis

Sales, margins, back orders and customer balances by brand, territory and salesperson.

Quotation Compare

Two quotations side by side, with differences in quantity and price highlighted.

Incoming Payments

Pick open invoices, apply the receipt and post, all from one guided screen.

WHAT YOUR TEAM GETS

- ✓ Orders posted from a single chat
- ✓ Customer prices filled in from SAP
- ✓ Customer POs turned into orders by AI

PURCHASE · PROCURE TO PAY

A smarter path from request to payment

Requests, orders, receipts and invoices move forward with copy-from agents, three-way matching and an AI invoice desk, so stores and accounts stop re-typing.

Purchase Request Any employee → **Purchase Order** Merge PRs → **Goods Receipt** GRPO & sorting → **Putaway** Bins & twin → **A/P Invoice** 3-way match → **Approval** Multi-stage → **Payment** Optimised run

🔁 PR → PO → GRPO

Merge several purchase requests into one order, receive against it, and post with batches, serials and bins.

⚖️ Three-way match

PO, goods receipt and invoice are compared line by line. Price and quantity variances are flagged before posting.

📥 AP Invoice Processing

Invoices arrive by email or folder, are read by OCR and queued for review, then go through approval stages before they post.

🏷️ GRPO Sorting

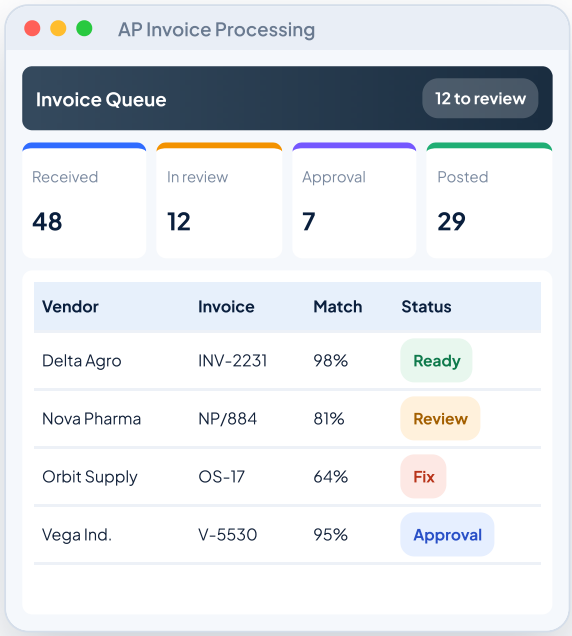

Sort received goods into grades and record every sorted line in SAP for analytics.

🏢 Warehouse Digital Twin

See occupancy by aisle and level, with an AI brief on full aisles and misplaced fast movers.

💸 Outgoing Payments

Pay vendors from their open invoices, by bank, cheque or cash, in one guided step.

The AP Invoice Processing queue: OCR, matching and approval in one place.

📈 Purchase Analysis & AP Aging

Spend, returns, price trends, on-time receipts and vendor balances, plus vendor payment aging with future remittance, all with an AI analyst you can question.

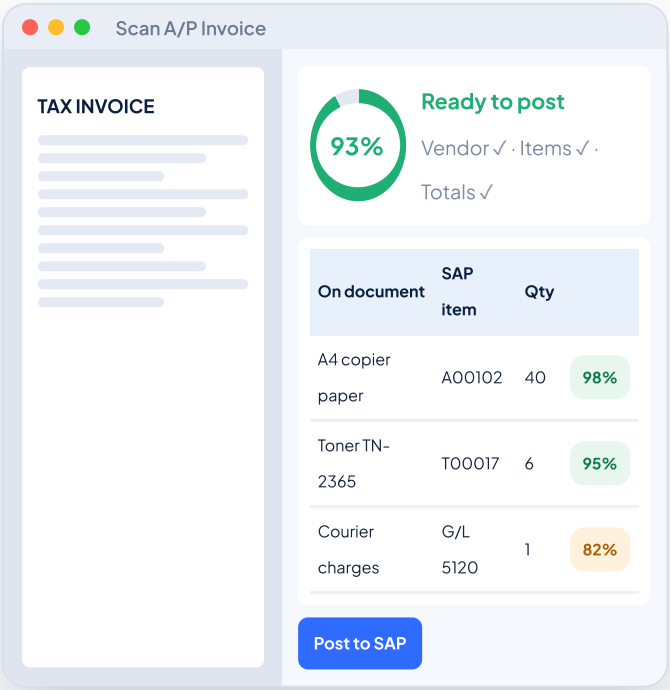

WHAT YOUR TEAM GETS

- ✓ Invoices matched before they post
- ✓ Approvals routed stage by stage
- ✓ No re-typing between documents

DOCUMENT AI

Paper in, SAP documents out

Drop a PDF or photo. AgentSphere reads every field, matches vendors, items and accounts against SAP, and shows a match score so you know exactly what to check before you post.

Side-by-side review: the document on the left, the SAP-matched form and match score on the right.

Supplier & expense invoices

Matched to GRPOs or posted as service invoices with suggested G/L accounts and tax codes.

Purchase orders & customer POs

Supplier quotes become purchase orders; customer POs, uploaded or emailed, become sales orders.

Inward challans & gate passes

Kept in digital registers with duplicate detection and links to open POs.

Bank reconciliation

Reads the bank statement, matches it with the SAP bank ledger, and produces the reconciliation statement for export to Excel.

Upload / Email — PDF, JPG, PNG, TIFF → **AI reads** — Every field & line → **Match to SAP** — Vendor, item, G/L → **Match score** — Ready · Review · Fix → **Post** — Live in SAP B1

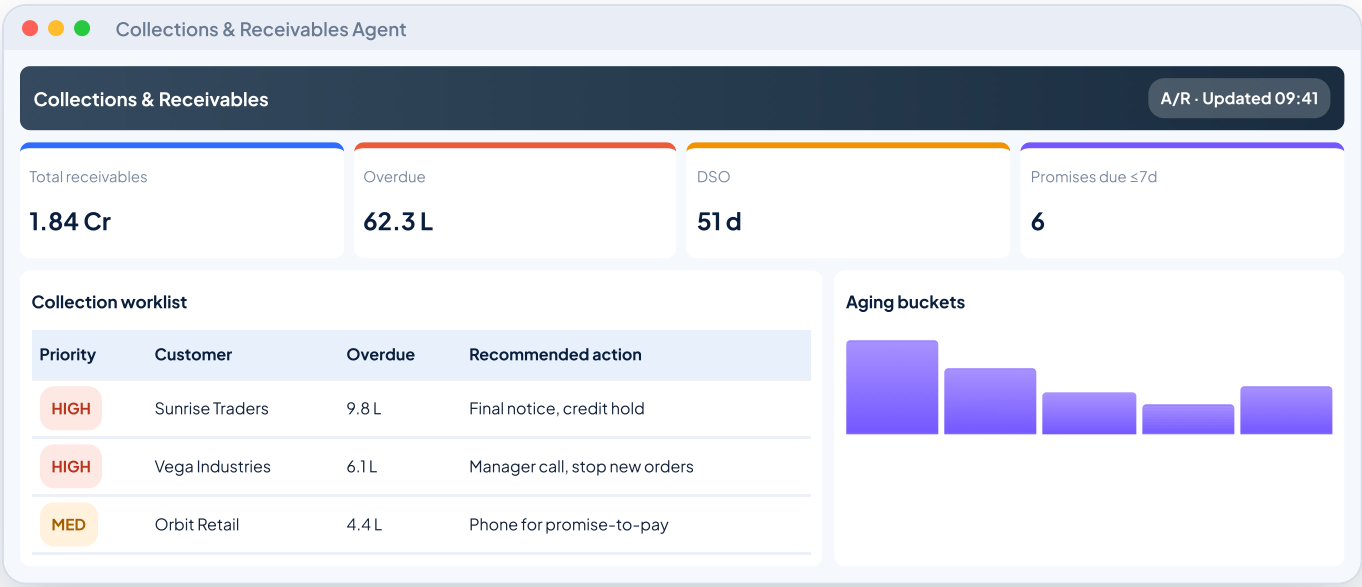

WHAT YOUR TEAM GETS

- ✓ A match score before every post
- ✓ Duplicate documents caught
- ✓ Works with scans and phone photos

FINANCE & CREDIT INTELLIGENCE

A finance team that never sleeps

Eight finance agents analyse receivables, payables, cash and margins every time you open them. Each one shows its reasoning, so you can act with confidence.

Collections Agent: a prioritised worklist, with a recommended action for every customer.

💰 Collections

Who to chase first, AI-drafted reminders, promise-to-pay tracking.

🌊 Cash Flow Forecast

13-week view of inflows and outflows that flags shortfall weeks early.

🛡️ Credit Risk

A–E risk grades, a watchlist and suggested credit limits.

🏢 Payment Optimisation

The best payment run for your cash, capturing worthwhile discounts.

📈 Profitability

Gross profit by customer, item, salesperson, branch and more.

🔍 Margin Leakage

Finds below-cost sales, excess discounts, price anomalies and unbilled freight.

🏅 Sales Commission

Commission by sales, collections or margin, with clawbacks.

🗓️ Month-End Close

A 14-point close checklist with a readiness score.

📄 Live financial statements

Balance Sheet, Profit & Loss, Trial Balance and a Financial Dashboard straight from SAP HANA, each with an AI narrative and follow-up questions. Salary registers post as journal entries from Excel.

WHAT YOUR TEAM GETS

- ✓ Know exactly who to call first
- ✓ See cash gaps weeks ahead
- ✓ Close the month with a checklist

INVENTORY & SUPPLY CHAIN

Right stock, right place, right time

From automatic reorders to dead-stock clean-up, the supply-chain agents watch your inventory, vendors and production so problems surface before customers notice.

Inventory Dashboard: stock, ledger, valuation, aging, dead stock and item profit.

AUTOMATED REPLENISHMENT

1 · MRP scan
Items below minimum, projected stock

2 · Draft POs by vendor
Rounded to order multiples

3 · SAP approval
Your approval templates apply

4 · Post & email vendor
Fully audited

Stock workflows
Transfer requests, transfers, goods issues and receipts, with live stock checks and batch, serial and bin pickers.

Rush Orders
Urgency scores for open orders, with expedite approval and SAP alerts.

Shipment Delays
Predicts late POs from vendor history and shows the orders affected.

Production Agent
Production orders at risk from component shortages, with costing.

Vendor Performance
OTIF, price, quality and lead-time scorecards graded A–D.

Inventory Optimisation
Safety stock, min/max and ABC-XYZ classes, with dead-stock actions.

WHAT YOUR TEAM GETS

- ✓ Reorders drafted automatically
- ✓ Late shipments flagged early
- ✓ Dead stock found and actioned

PRICING, PIPELINE & FORECASTING

Sell smarter. Plan further ahead.

AI agents protect your margins, keep the sales pipeline moving and forecast demand with statistical models, then explain every recommendation.

Dynamic Pricing

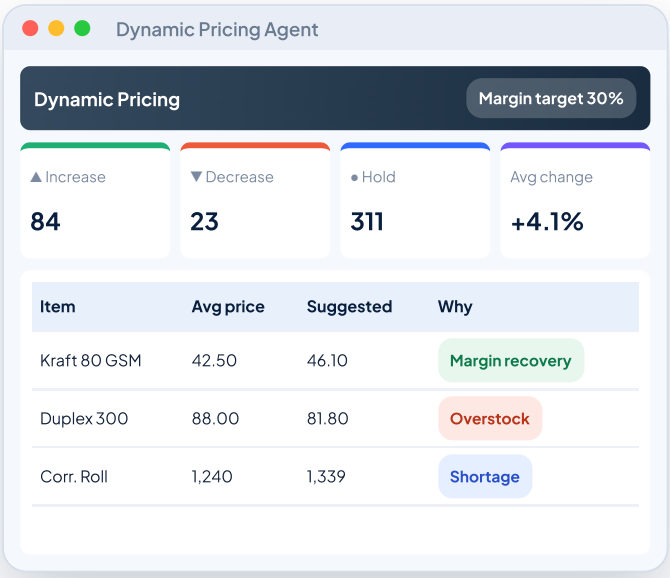

Nine pricing rules suggest increases, holds or clearance prices per item. Apply a price to your SAP price list in one click.

Quotation Intelligence

Checks every quoted price against cost, margin targets and price history, and recommends the right price.

Sales Follow-up

Prioritises stale quotes, delayed orders and slipping opportunities, then drafts the email or creates the SAP task.

Dynamic Pricing: every suggested price comes with its reason.

Order Intelligence

Spots sales orders at risk of stock shortages before they are due, and shows which items are the bottleneck.

📉 Forecasting that explains itself

Choose from statistical models (moving averages, exponential smoothing, linear trend and Holt-Winters) with automatic best-model selection by accuracy. Forecast sales, demand and supply per item or item group, run a full S&OP plan with order-by dates, and ask the Forecast AI what to do next.

Demand Forecast · Forecast with BI · Forecast Dashboard · Product Forecasting · S&OP Demand Plan

WHAT YOUR TEAM GETS

- ✓ Margins protected on every quote
- ✓ No follow-up forgotten
- ✓ Forecasts with accuracy scores

PLATFORM & AI STUDIO

Build your own agents, no coding required

Describe what you need in plain language and AI Studio builds it: chat agents, transaction screens, SAP tables, data APIs and approval workflows, published straight to your menu.

Chat Agents
Custom assistants with their own persona, instructions and quick replies.

Form Designer
Generate a transaction screen from a description, a screenshot or a PDF.

Tables & Fields
Plan and create SAP user-defined tables and fields with AI.

Data APIs
Read-only APIs such as "overdue A/R by customer", tested before you publish.

Local Tables
Simple registers, such as a visitor log, stored in AgentSphere.

Workflows
Step-by-step processes with forms, conditions and approvals.

ENTERPRISE FOUNDATION

- **Roles & permissions** on every menu item, plus per-user rights.
- **Multi-company:** switch SAP companies per user session.
- **AI credits & usage** limits per user, with blocking and reporting.
- **Excel import** for items, business partners, BOMs, sales orders and A/P expenses.
- **Master data wizards** with GSTIN check and duplicate detection.
- **White-label branding**, Fiori or HANA theme, and day and night modes.

DEVELOPER TOOLS

- **DB Query Builder** with AI-written, read-only SQL.
- **Reports & KPIs** library with around 28 ready-made reports.
- **Schema Registry** that teaches the AI your UDFs and custom views.
- **Query Library** of reusable prompts and answers.
- **Data Sync** master-data cache for instant lookups.
- **Self-hosted** on your own server, close to your SAP.

WHAT YOUR TEAM GETS

- New screens without coding
- Secure by role and by company
- Runs on your own server

AgentSphere

Give every team in your company an AI colleague.

See AgentSphere working on your own SAP Business One data. Our team will connect it to a test company, walk through the agents that matter most to you, and plan a rollout that fits your business.

Ask. Scan. Click. Done.

Live demo

A guided tour on your own SAP Business One company.

Proof of value

Start with one process, such as invoices or collections, and measure the gain.

Rollout & support

Installation, configuration, training and ongoing support.

ABOUT SILVER TOUCH TECHNOLOGIES
